## Amendments to the Claims:

1.

The following listing of claims will replace all prior versions, and listings, of claims in the application:

(Previously Presented) An electro-optical device, comprising:

- an electro-optical substance;
  a pair of substrates holding the electro-optical substance; and
  pole-like spacers provided on at least one substrate of the pair of substrates, on
  a to-be-provided surface of the at least one substrate facing the electro-optical substance, each
  pole-like spacer having an elongated sectional shape including a rounded initial contact
  surface and separation surface in a direction of elongation, and at roots thereof, a slope
- 2. (Previously Presented) The electro-optical device according to claim 1, further including an orientation film formed on the to-be-provided surface of the at least one substrate, the pole-like spacers having an elliptic shape in cross-section on a plane in parallel with the to-be-provided surface, and a long diameter of the elliptic shape extending in a direction in agreement with a direction in which the orientation film is rubbed.

portion with a surface connecting to the to-be-provided surface of the at least one substrate.

3. (Previously Presented) An electro-optical device, comprising:
 an electro-optical substance;
 a pair of substrates holding the electro-optical substance;

pole-like spacers provided on at least one substrate of the pair of substrates, on a to-be-provided surface of the at least one substrate facing the electro-optical substance, each pole-like spacer having an elliptic-shaped cross-section including a rounded initial contact surface and separation surface in a direction of a major axis of the elliptic-shaped cross-section, and at roots thereof, a slope portion with a surface connecting to the to-be-provided surface of the at least one substrate; and

an orientation film formed on the to-be-provided surface of the at least one substrate, the orientation film being rubbed in the direction of the major axis of the elliptic-shaped cross-section.

- 4. (Original) The electro-optical device according to claim 1, the slope portion being formed on an entire outer circumference of the pole-like spacers.
- 5. (Original) The electro-optical device according to claim 1, the pole-like spacers having a maximum area of sectional shape on a plane in parallel with the to-be-provided surface and in contact with the to-be-provided surface, and the area decreasing as it extends from the to-be-provided surface.
- 6. (Original) The electro-optical device according to claim 1, the pole-like spacers having at least one of a semi-spherical shape and a semi-elliptic spherical shape.
- 7. (Original) The electro-optical device according to claim 1, a head end of the pole-like spacers including a flat surface.
  - 8. (Original) The electro-optical device according to claim 1, further including: a first striped wiring formed on the at least one substrate;

a second striped wiring formed on the at least one substrate or the other substrate, and extending in a direction that intersects the first striped wiring;

switching elements and pixel electrodes formed corresponding to regions where the second striped wiring and the first striped wiring intersect each other; and

a light-shielding film formed on the at least one substrate or the other substrate at a position corresponding to a position where the first striped wiring and the second striped wiring are formed;

the pole-like spacers being arranged within a width of the light-shielding film.

9. (Original) The electro-optical device according to claim 1, further including: a first striped electrode formed on the at least one substrate;

a second striped electrode formed on the other substrate, and extending in a direction that intersects the first striped electrode; and

a light-shielding film formed on the at least one substrate or the other substrate except regions where the first striped electrode and the second striped electrode intersect each other;

the pole-like spacers being arranged within a width of the light-shielding film.

- 10. (Original) An electronic equipment, comprising: the electro-optical device according to claim 1.
- 11. (Canceled)
- 12. (Currently Amended) An electro-optical device comprising:
- a TFT array substrate:
- a counter substrate:

pixel electrodes formed on the TFT array substrate:

a counter electrode formed on the counter substrate:

an electro-optical substance held between the TFT array substrate and the counter substrate; and

a light-shielding film formed between the counter substrate and the counter electrode, the light-shielding film forming including pole-like spacers arranged along gaps among the pixel electrodes.
